Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant stated that the combination of Tani and Hillig would not result in the claimed article, because the combination would result in a stratified matrix, which is precluded by the claims. Examiner disagreed stating that Tani sets forth the claimed structure and provides for nonwoven support layers within the laminate eventhough it uses a different method of manufacture. Applicant proposed submitting a Declaration demonstrating that the process of making the invention of Tani can only result in areas of stratified matrix and that the use of chemical vapor infiltration provides the instant invention with a structure substantially free of continuous, stratified matrix rich areas .
